NOTICES

When Government drawings, specifications, or other data are used for any purpose other than in connection with a definitely related Government procurement operation, the United States Government thereby incurs no responsibility nor any obligation whatsoever; and the fact that the Government may have formulated, furnished, or in any way supplied the said drawings, specifications, or other data, is not to be regarded by implication or otherwise as in any manner licensing the holder or any other person or corporation, or conveying any rights or permission to manufacture, use, or sell any patented invention that may in any way be related thereto.

This report has been reviewed by the Office of Public Affairs (ASD/PA) and is releasable to the National Technical Information Service (NTIS). At NTIS, it will be available to the general public, including foreign nations.

This technical report has been reviewed and is approved for publication.

FOREWORD

This technical report provides the results of the Information Modeling Task associated with the "Design Product" Model. This work was performed under Air Force Contract #F33615-80-C-5109, "ICAM ARCHITECTURE, PART III," covering the period of September 1980 through October 1982. The contract was sponsored by the Computer Integrated Manufacturing Branch, Materials Laboratory, Air Force Wright Aeronautical Laboratories, Air Force Systems Command, Wright Patterson Air Force Base, Ohio, 45433. The Air Force Technical Manager for ICAM ARCHITECTURE PART III was Capt Steve R. LeClair for the basic contract and Capt Richard R. Preston for the Option.

Bette Davis was the SofTech Program Manager. The other contributors to this document were;

SofTech, Inc

Stan Smith

D. Appleton Company

Chuck Martin

Section 1 SCOPE

1.1 Identification

This volume documents that part of the ICAM Architecture of Design and Manufacturing designated as DES1. DES1 depicts the functional "AS IS" architecture of the diverse information presently in use within aerospace design.

This part of the architecture has been developed using IDEF (ICAM Definition Language) information modeling. The model presented herein is a composite Model of the information within "Design (Aerospace) Product". This composite view architecture represents those functions most typical of the majority of aerospace manufactures in the United States and is not intended to represent any specific company.

This volume documents work performed under ICAM Project Priority 1104 - ICAM Architecture of Manufacturing Part III.

1.2 Background

The Integrated Computer Aided Manufacturing (ICAM) program has as its objective the improvement of productivity in the aerospace manufacturing sectors of American industry. It is directed toward improving productivity through the systematic application of computer technology in the design and manufacturing environment. This approach is not only ambitious, but is also realistic in that it stresses the development of computer aided design and manufacturing capabilities. The integration of these computer aids into the design and manufacturing environment and among themselves will ultimately signal the success of the ICAM program.

A key to the achievement of this goal is the development of the ICAM Definition (IDEF) Methods and the ICAM composite models of design and manufacturing. The ICAM Definition Methods are a family of techniques through which — analysts and laymen explore and discuss the nature of design and manufacturing systems. These techniques, developed for the ICAM program, provide a means of studying, recording, and communicating the inherent requirements and realities of the aerospace manufacturing environment. They are equally effective and valuable in many other manufacturing and non-manufacturing environments.

There are three ICAM Definition Methods: IDEFg - Function Modeling; IDEF $_1$ - Information Modeling; and IDEF $_2$ - Dynamics Modeling. A manufacturing system is described and studied through the application of all three techniques.

The ICAM composite models of manufacturing, or architectures, record a "consensus view" of what manufacturing is and how it operates. Composite architectures are presented in two forms: the "AS IS" form - representing the way in which manufacturing is currently accomplished; and the "IO BE" form - representing the way in which manufacturing will be accomplished with computer aids in place.

As prime contractor, SofTech subcontracted to DACOM the development of the "AS IS" Information model of design. This model is presented in its current state of development. It is expected that refinements will continually be made to the model as a result of its use. The vast amount of information which it contains makes it impossible to comprehend by cursory examination. A tremendous effort has gone into the preparation of the model which is the end result of this project. This report summarizes that effort and presents the critical features of the resulting model. Many stages of critique, validation, and checking have been invested to make sure that the published model and glossary are as complete, readable, consistent and correct as possible.

Architecture Process

The necessary first step in increasing design productivity is to understand current design practice precisely and to record this understanding concisely. This development of understanding has two main phases:

- Study specific company design
- Evolve a composite understanding

Factory View

Understanding of the current manufaturing design process must be based on the detailed factual information which describes this process in those companies which successfully produce aerospace products. This has been called "Factory View" information. The Factory View of manufacturing design is different for each company, for each division of each plant within a company, and even somewhat different for each organization and each individual within each plant.

Composite View

One objective of ICAM is to develop improvements in the design process which will be broadly applicable across the whole aerospace industry. In order to do this, it is necessary to have some understanding of "general of generic design practice." Such an understanding emphasizes the essential information necessary to all design processes, while de-emphasizing the differences of organization and terminology among the various factory views.

The model representing this aggregate understanding is called the "Composite View" of design. The composite view model presented in this volume depicts design as it exists today in the form of an information model. The composite view of the existing information used in design which has been produced in this project emphasize the technical aspects of current practice for the production of a single, new major aerospace product, such as an airplane.

Architecture Validation

From the first week of the project, a constant process of review guides the development of the architecture. Each version of the arheitecture is distributed to the coalition members for comment. These versions receive a "Working" status meaning the architecture is undergoing change within the group responsible for its development. The comments cause changes ranging from complete restructuring of various levels of architecture to clarification of individual words used in detailing lower levels.

This process of revise, review, revise continues throughout the building of the model. When the coalition decides that the model, or portions of it, are ready for industry review, the status is changed to "Draft."

Every 6 months throughout the project, an Industry Review Meeting is held. The Industry Reviewers represent various manufacturing companies. They review the "Draft" version of the model to insure that it is representative of design as a whole. Portions of the model that receive a consensus of approval are marked "Recommended." This signifies that their content is recommended for Air Force acceptance. Portions that do not receive consensus remain at "Draft" status and receive further review and revision.

Development of this model has included phases 0, 1, 2 and 3 as described in Volume V AFWAL-TR-81-4023, "Information Modeling Manual (IDEF1)" published in June of 1981 as part of the ICAM Architecture Part II, Project Priority 1102. Phase 4 as defined in that volume has not been completed.

1.3 Functional Description of Document

This volume of this report, documents the Architecture of Manufacturing information model of Design (DES1) which when combined with volumes III (DESØ), V (MFGØ), VI (MFGI) of this report makeup the current ICAM Architecture of Manufacturing. Volume IV DES1 is an integrated composite IDEF1 model of information indigenous to Aerospace design and Manufacturing

This volume is intended as a guide for the development of IDEF1 models by systems analysts and database designers involved in the integration of new design, manufacturing and computer system technology into the design and manufacturing environment.

Section 2 INFORMATION MODEL OF DESIGN DESI

2.1 NODE Index (DES1)

The Node Index serves as a "Table of Contents" for the DES1 diagrams and glossaries, allowing a quick overview of all the entity classes in the model.

2.2 Alphabetized Entity Class Glossary

The alphabetized glossary:

- 1. Facilitates the locating of the diagram and glossary for a desired entity class.
- 2. Provides a quick reference when the reader needs only the definition of an entity class.
- 3. Provides a cross-reference of corresponding names, labels, and synonyms which may be encountered in the model or in supporting documentation.

Advanced Material A Notice				
	AM	43	A document used as authorization to initiate and expedite procurement, replacement or cancellation of material, including parts and assemblies, after a requirement has been defined, but prior to the completion of the end product drawing(s) and/or EOs.	Advanced Material Order (AMO)
Advanced Material A Notice Approval	ANM Appvl.	164	The indication that an authorized approval has acknowledged that the Advanced Material Notice conforms to the requirements of the task and procedure under which it was originated.	
Advanced Material A Notice Item	AM It.	141	The chronological order and sequence of the items which appear on and make up the order. Thus, the AMN Item number is the identification for that item on its order.	
Advanced Material A Notice Item Callout	AMNI Call.	142	Occurrence of the reference of the Material Specification which details the requirements of the material for which the Notice is in effect.	
Advanced Material A Notice Item Part	AMNI Part	144	The occurrence of a part number as the item reference on a particular notice. Thus, a specific relationship between the item and the part is established.	
Advanced Material A Notice Source	AMN Srce.	157	The occurrence of the effort of creating an Advanced Material Notice in conjunction with the Engineering Assignment, through which an Employee originates the information according to the task and procedure at hand.	
NODE	TITLE ENT	ITY CL/	ENTITY CLASS GLOSSARY (ALPHABETIZED)	EIR.

NAME	LABEL	NO.	DESCRIPTION	SYNONYM(S)
Approval Authority	Appvl. Auth.	88	The occurrence of the specific Employee being granted authority to approve specific pleces of information as authorized and described by the specific procedure (manual) which governs or pertains to such information.	
Authorized Material	Auth. Mat'l.	145	The occurrence of the material identification and the part number so that the exact material is referenced to the specific part.	
Change/Deviation Request	Chng/Dev. Req.	21	A document which identifies changes/deviations from a contractual requirement. It contains information which substantiates the reasons for the changes/deviations, proof that the item which incorporates the deviation will remain suitable for the intended operational use, and proof that any alternate processes or materials specified are equal to or better than the specified requirements.	
Configuration	Config.	14	The contractual description and requirements of the contractually deliverable end item, Vodesigned to satisfy a specific need or goal, which has a relative disposition and make-up of component parts at any given time.	Product Configuration, Vehicle
Configuration List	Config. List	84	A document that provides effectivity information for all limited parts, assemblies and traveling parts used to make a specific end item.	
NODE:	TITLE: ENT	ITY CI	ENTITY CLASS GLOSSARY (ALPHABETIZED)	

SYNONYM(S)						2
DESCRIPTION	The indication that an authorized approval has acknowledged that the Configuration List conforms to the requirements of the task and procedure under which it was originated.	The chronological order and sequence of each of the items associated with the specific configuration list. Thus, the item number serves as the identification for a particular item within the list.	The occurrence of the effort of creating a Configuration List in conjunction with the Engineering Assignment, through which an Employee originates the information according to the task and procedure at hand.	A document which constitutes an agreement tetween two parties whereby the contractor commits himself to render specific end items or products and includes changes, amendments, supplements, and exhibits.	An official (released and accepted) change to the Contract Requirements, effecting the deliverable product (end item). Sometimes referred to as a Contract Amendment or Contract Addendum. Engineering Order	E.0.	m	Document prepared to authorize revisions to released drawings, set forth configurations for new parts; authorize all drawing changes and provide control effectivity records.
Engineering Order Approval	E.O. Appvl.	166	The indication that an authorized approval has acknowledged that the Engineering Order conforms to the requirements of the task and procedure under which it was originated.
Engineering Order Item	E.O. Item	138	The chronological order and sequence of the items which appear on and make up the Order. Thus, the E.O. Item is the identification for that item on its order.
Engineering Order Source	E.O. Srce.	159	The occurrence of the effort of creating an Engineering Order in conjunction with the Engineering Assignment, through which an Employee originates the information in accordance with the task and procedure at hand.
Engineering Release	Eng. Rel.	28	A document authorizing the release of listed Engineering documents (e.g., drawings, E.O.'s, AMN's) for the procurement or manufacturing action, and also for input to the applicable scheduling and tracking system.
Engineering Release Approval	Eng. Rel. Appvl.	152	The indication that an authorized approval has acknowledged that the contents of the release package are in keeping with the tasks and procedures which govern their origination and that the appropriate task and procedure have been complied with in preparing for the release.
NODE	TITLE ENT	ITY CL/	ENTITY CLASS GLOSSARY (ALPHABETIZED)

NAME	LABEL	NO.	DESCRIPTION SYN	SYNONYM(S)
Fngineering Release Item	ER Item	167	The chronological and sequence order of the items which appear on and constitute the Engineering Release. Thus, the ER Item number serves as the identification for that item as it appears on the release.	
Frighteering Release Source	Eng. Rel. Srce.	171	The occurrence of the effort of creating an Engineering Release in conjunction with the Engineering Assignment, through which an Employee originates the information according to the task and procedure at hand.	
Engineering Task	Eng. Task	107	The incremental effort that constitutes an overall effort or activity which is aimed at completing specific milestones or objectives. Each effort which completes a portion of the deliverable product may be classified as an Eng. Task.	
Functional/ Subcontract Schedule	Funct./ Subcon. Schedule	115	The first-level major breakdown of the Master Schedule. It provides for the coordinated scheduling of major functional efforts, plus, for the release of major subcontract work.	
Manual/Procedure	Man/Proc	74	Prescribe the policies/procedures to be followed when preparing, issuing, monitoring, controlling and processing of design data.	
Master Schedule	Mst. Sched.	114	The overall schedule of an organization's overall resources - scheduling manpower, machinery, tools, etc., required to produce the end items. The Master Schedule, then, becomes the guide for producing the various product delivery schedules for the orders which are active or pending.	
NODE	TITLE ENT	TY CL	ENTITY CLASS GLOSSARY (ALPHABETIZED)	

NAME	LABEL	NO.	DESCRIPTION SYNONYM(S)	
Material	маt'l.	69	The information about the basic, or raw material which will be used to fabricate a part or component of the end item.	
Material Specification	Mat'l. Spec.	19	The description of the technical and physical characteristics, as well as the performance requirements, of a specific material to be used in the end item. The material specification also includes the testing, inspecting, handling, etc., requirements to which the material will be subjected.	
Milestone	Mile.	126	An interim (i.e., between the Start of a Task and its Completion) event or activity which is indicative of the satisfactory progress being made on the Task, once the Milestone is satisfactorily met.	
Model/End Item	Mode]	86	The identification of the final product, (deliverable end item) which is deliverable under the contract, describing an exact hardware configuration and associated software.	
Next Assembly Usage	Next Assy. Us.	40	The identification of the physical structure (piece, unit, subassembly, or the like) to which the part will be attached (or into which it will be incorporated) to form that next assembly.	
Next Assembly Usage Approval	Next Ass'y. Use. Appvl.	161	The indication that an authorized approval has acknowledged that the Next Assembly Usage conforms to the requirements of the task and procedure under which it was originated.

Release Package	Rel. Pkg.	93	A compilation of documents which may consist of: the drawing and parts list, or the drawing with a direct drawing change ED and parts list, plus any applicable output sheets, automated or non-automated.	
Release Package Item	Rel. Pkg. It.	691	The chronological order and sequence of each of the items associated with the particular release package. Thus, the item number serves as the identification for the specific item within the package.	
Replacement Part	Repl. Part	143	The indication of an acceptable alternative for the subject part. Also, the <u>Replacement Part</u> is the indication of which parts may be satisfactorily substituted for by the subject part.	
Request for Proposal	RFP	123	A request to prepare a proposal/quotation for a specific end item, or change to a specific end item.	
Requirement.	Req't.	117	A specified or stipulated end item deliverable, which will be further defined by the various specifications. Then, the Design Data will ultimately satisfy the requirements.	
NODE	TITLE: ENT	ITY CI	ENTITY CLASS GLOSSARY (ALPHABETIZED)	

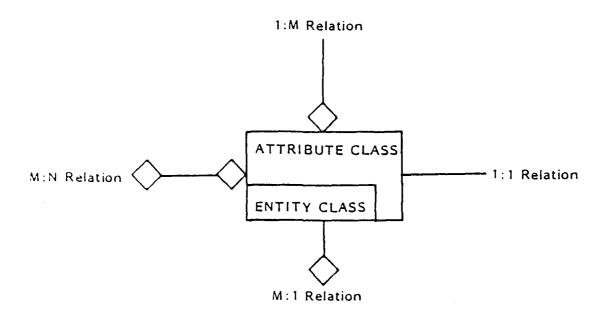

SYNONYM(S)						3ER:
DESCRIPTION	The definitive description of the end items which are stipulated in the Contract. Often times the Req'ts. Spec. is a part of the Contract. It serves as the foundation for the development of the Design documentation - drawings, specifications, etc., etc. It defines the Requirements.	The identification and description of all of the design details (parts and support equipment) which are to be a part of a specific end item.	The indication of a specific relationship between a parts list item and a ship set configuration.	A document which establishes and describes the technical and physical characteristics and performance requirements of specific equipment, materials, processes, products, or services including the packaging on a packing, marking or other essential characteristics or requirements, together with the prescribed methods of inspection and testing for determining that these requirements have been met.	The indication that an authorized approval has acknowledged that the specification conforms to the requirements of the task and procedure under which it was originated.	ENTITY CLASS GLOSSARY (ALPHABETIZED)

Specification Revision	Spec.	c. Rev.	136	The indication and identification of the release level (i.e., the original release and successive modification releases) of the overall Specification.	
Specification Sheet Approval	eet Spec. Appvl	s. Sht. 71.	163	The indication that an authorized approval has acknowledged that the Specification Sheet conforms to the requirements of the task and procedure under which it was originated.	
Specification Sheet	eet Spec.	Sheet	134	A page of a specification, carrying with it its page identification (page number) and relative pages for the entire specification (e.g., Page 2 of 10).	
Specification Sheet Revision	heet Spec. Rev.	Sheet	135	The identification and indication of the release level (i.e., the original release and successive modification releases) of the particular sheet of the Specification.	
Specification Source	. Spec.	Srce.	103	The occurrence of the effort of creating a Specification in conjunction with the Engineering Assignment, through which an Employee originates the information according to the task and procedure at hand.	
Summary Cost Account	Sum. Acct	Cst.	113	The first-level subdivision of the WBS. It serves as the summation level for the appropriate Work Package efforts. It provides an analysis of the associated WBS items.	
NODE	THE		ITY CL/	ENTITY CLASS GLOSSARY (ALPHABETIZED)	

NAME	LABEL	NO.	DESCRIPTION	SYNONYM(S)
Task Completion	Task Comp.	129	The information about the "actual" completion of a specific task.	
Task Instruction	Tsk. Inst.	168	The information about the unit of work which will effect the creation of a discrete portion of design data. The instruction details what is to be designed, how it is to be designed, and the guidelines (standards procedures, etc.) to be used as reference.	
Task Startup	Task St.	128	The recorded indication of the "actual" start of a task and is the repository of the "current status" of that task, in terms of the "percentage of completion," etc.	
Work Authority	Work Auth.	53	A document issued by the Program Management to each operating department and: defines the specific workscope to be performed, authorizes the expenditure of resources for the workscope defined and scheduled states the authorized budget value, establishes related time and value limitations, and provides and/or references applicable schedules.	
Work Breakdown Structure	SBM	55	A product-oriented family tree composed of hardware, software, services, and after work tasks which result from efforts during the development and production of an end item, and which completely defines the project/program.
